Research Experience

- **Reinforcement Learning with Perturbed Rewards** — *July 2018 - Oct. 2018*
  - ***Advisor:** Profs. Yang Liu and Bo Li* — *UIUC, USA**
  - Introduce an unbiased estimator of reward in reinforcement learning which guarantees risk minimization without any assumptions on the true distribution.
  - Propose an efficient iterative algorithm for estimating the confusion matrices of corrupted rewards in the training.
  - Study the convergence and finite sample complexity theoretically under the proposed reward proxy.
- **Understanding Adversarial Examples as the Abuse of Redundancy** — *Mar 2018 - July 2018*
  - ***Advisor:** Profs. Bo Li and Dawn Song* — *UC Berkeley, USA**
  - Propose a model for adversarial examples consistent with related work, physics and information theory.

- Reinterpret the Helmholtz free energy formula to explain the relationship between content and noise for sensor-based data.
- Prove that input redundancy is a necessary condition for being able to generate adversarial examples.
- Validate that adversarial examples are indeed overflowing perceptrons trained on a certain level of redundancy.

- **Multiple Embeddings for Chinese Word Segmentation** *Feb 2018 - May 2018*
  - ***Advisor:*** *Prof. Gongshen Liu* *SJTU, China*
  - Leverage both semantic and phonetic features of Chinese characters in NLP tasks by introducing *Pinyin Romanization* and *Wubi Input* Embeddings.
  - Achieve the state-of-the-art performance in AS and CityU corpora with F1 scores of 96.9 and 97.3.
- **Benchmark for Driving Policy Learning** *Apr 2017 - Feb 2018*
  - ***Advisor:*** *Prof. Cewu Lu* *SJTU, China*
  - Propose a dataset which is the first policy learning benchmark composed of driving videos, LiDAR data, and corresponding driving behaviors.
  - Conduct the complete analysis on how important depth information is, how to leverage depth information and what we can achieve by utilizing current techniques.
